

## POST - OPERATIVE INSTRUCTIONS

### Pain Management

- During the procedure local anaesthetic is injected into the operative site, which should numb the area for 6-12 hours after your procedure.
- Upon discharge you may begin to feel some discomfort for which you may take:
  - Panadol/Panadeine/Panadeine Forte, 2 tablets every 6 hours regularly for the first 48-72 hours.
  - Anti-inflammatory e.g. Nurofen can be used in addition if required.
- If your pain is not controlled with the above measures, contact WPRS for advice.

### Wound Care

- The dressings on your eyelids will stay intact for 5 days. You may get this dressing wet and should pat it dry. If your dressing falls off, please contact WPRS in hours for advice.
- At night sleep on a couple of pillows so your head is elevated to control the swelling.
- To control swelling around your eyes, place a cool pack on your eyes for 10 minutes every 2 hours. You should continue this for 48 hours. Do not be concerned regarding eye swelling as this is common following eyelid surgery.
- If any bleeding occurs upon discharge, sit upright and apply gentle pressure for 10 minutes and then reassess. Contact WPRS if the bleeding does not cease following these measures.
- Small amounts of ooze from your wound is normal. Please consult WPRS if you are concerned by the amount or type of discharge.

### Activity

- Please rest for the first 5 days after the operation.
- You should avoid driving till vision return to normal and only return to driving once you feel safe
- After the first week post operatively you may return to normal activities as tolerated by your body.
- You may return to sport and other strenuous exercise after 4 weeks.
